

JSON DATA

1. Create a JSON data set

```
library(rjsonio)
Num <- [1:5]
Name <- c("aaa", "bbb", "cccc", "ddd", "eee")
data <- as.matrix(data.frame(Num,Name))
cat(toJSON(data))
```

Note: JSON data is a key-value pairs list.

2. Read the JSON data set

```
library("rjson")  
json_data = fromJSON(file=data)
```

We can use function 'fromJSON' to read the JSON data set
