JSON DATA

1. Create a JSON data set

```
library(rjsonio)
number<-c(1010,1011,1012,1013,1014,1015,1016)
name<-c("Alice","Bob","Cindy","David","Ella","Frank","Gres")
da<-as.matrix(data.frame(number,name))
s<-cat(toJSON(da))
```

Note: JSON data is a key-value pairs list.

2. Read the JSON data set

```
library("rjson")
json_data = fromJSON(file=data)
```

We can use function 'fromJSON' to read the JSON data set
